### Question: 1

ITExamsQuiz

You need to connect Vnet2 and Vnet3. The solution must meet the virtual networking requirements and the business requirements.

Which two actions should you include in the solution? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. On the peerings from Vnet2 and Vnet3, select Use remote gateways.
- B. On the peering from Vnet1, select Allow forwarded traffic.
- C. On the peering from Vnet1, select Use remote gateways.
- D. On the peering from Vnet1, select Allow gateway transit.
- E. On the peerings from Vnet2 and Vnet3, select Allow gateway transit.

✓ Answer: A,D

**Explanation:**

To connect Vnet2 and Vnet3 while meeting the requirements, you should configure a hub-and-spoke setup where Vnet1 acts as the hub with the VPN gateway. In this case, you need to enable Allow gateway transit on the peering from Vnet1 so that its gateway can be shared, and enable Use remote gateways on the peerings from Vnet2 and Vnet3 so they can utilize that shared gateway. This allows both Vnet2 and Vnet3 to route traffic through Vnet1's gateway efficiently.
